

Matt Stover is the head of Water Quality Standards, Assessment, and Antidegradation Section within the Maryland Department of the Environment (MDE) and has been with the Department for over 16 years. In this role, he oversees the development and adoption of Maryland's water quality standards regulations, assessments of water quality health throughout the State, and the implementation of antidegradation policy to protect high quality waters. Prior to working at MDE, Matt worked for the Maryland Department of Natural Resources and a private environmental consulting firm. He received his bachelor's degree from Washington College in Environmental Studies and his master's degree from Towson University in Environmental Science - Water Resource Management.
